

## Neural Style Transfer

## Content cost function

Content cost function

$$\underline{J(G)} = \alpha \underline{J_{content}(C,G)} + \beta J_{style}(S,G)$$

- Say you use hidden layer *l* to compute content cost.
- Use pre-trained ConvNet. (E.g., VGG network)
- Let  $\underline{a^{[l](C)}}$  and  $\underline{a^{[l](G)}}$  be the activation of layer l on the images
- If  $a^{[l](C)}$  and  $a^{[l](G)}$  are similar, both images have similar content  $\int_{Content} \left( C, C \right) = \frac{1}{2} \left[ \left( \frac{1}{2} \left( C \right) \right) \right]^{2}$
